                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBUNIT: Binds MD-2 and TLR6 via the extracellular domain. Binds MyD88 via their respective TIR domains.

SUBCELLULAR LOCATION: Type I membrane protein (By similarity).

TISSUE SPECIFICITY: Highly expressed in peripheral blood leukocytes, in particular in monocytes, in bone marrow, lymph now and in spleen. Also detected in lung and in fetal liver. Levels are low in other tissues.

PTM: N-glycosylated (By similarity).

SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.

SIMILARITY: CONTAINS 14 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ure 408:111-115(2000).

FUNCTION: Cooperates with MD-2 to mediate the innate immune FUNCTION: Cooperates with MD-2 to mediate the innate immune response to bacterial lipoproteins and other microbial cell wall components. Acts via MyD88 and TRAF6, leading to NF-kappa-B activation, cytokine secretion and the inflammatory response. May also promote apoptosis in response to lipoproteins. Recognizes mycoplasmal macrophage-activating lipopeptide-2kD (MALP-2), soluble tuberculosis factor (STP), phenol-soluble modulin (PSM) and B.burgdorferi outer surface protein A lipoprotein (OspA-L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cooperatively with

SUBUNIT: Binds TLR2 via their respective extracellular domains.
Binds MyD88 via their respective TR domains (By similarity).
SUBCELLULAR LOCATION: Type I membrane protein. Plasma membrane phagosomes (By similarity).
TISSUE SPECIFICITY: Detected in monocytes, CD11c+ immature dendritic cells, plasmacytoid pre-dendritic cells and dermal microvessel endothelial cells.
SIMILARITY: BELONGS TO THE TOLL-LIKE RECEPTOR FAMILY.
SIMILARITY: CONTAINS 13 LEUCINE-RICH REPEATS (LRR).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              FUNCTION: Participates in the innate immune response to Gram-
positive bacteria and fungi. Acts via MyD88 and TRAF6, leading
NF-kappa-B activation, cytokine secretion and the inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          response. Recognizes mycoplasmal macrophage-activating lipopeptide-2kD (MALP-2), soluble tuberculosis factor (STF), phenol-soluble modulin (PSM) and B.burgdorferi outer surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SWISS-PROT entry is copyright.
